

Harish Nadar

Backend Developer | Django | DRF | FastAPI

Mumbai 400-103 | 7039369562 | nadarharish03@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [Leetcode](#)

Summary

Backend Engineer specializing in Python and RESTful API development with Django, Django REST Framework, Flask and FastAPI. Experienced in JWT authentication, role-based access control, and Redis caching strategies, with strong grounding in relational (PostgreSQL) and NoSQL (MongoDB) database design and ORM query optimization. Skilled in architecting scalable backend systems and deploying them on cloud platforms including AWS and Render.

Experience

Backend Developer Intern | Django REST Framework
OnlineSavaari | Remote

MAR-APR 2026

- Developed and maintained RESTful APIs for flight and booking modules using Django and DRF, integrating third-party APIs for bookings, hotels, and channel management systems.
- Collaborated with senior developers on backend standards, endpoint testing, and real-world third-party service integration workflows.

Projects

LocalSeva Backend | [Live](#) - [API Endpoints](#) - [GitHub](#)

JAN 2026

- Architected a multi-role Django REST Framework backend for customers, providers, and marketplace sellers, implementing JWT authentication and role-based ownership controls across **24+ REST** endpoints, backed by *PostgreSQL, Cloudinary, and Redis*.
- Developed booking-lifecycle business logic enforcing state transitions (Pending → Accepted/Rejected → In Progress → Completed/Cancelled) with automatic timestamp tracking at each stage.
- Built an OLX-style marketplace with product management, seller ownership controls, category/location based search, comments, soft deletion, and report/moderation workflows.
- Optimized** provider and marketplace discovery using **Redis-backed** caching, in-memory filtering, and cache invalidation on provider updates, reducing repeated database access on frequently accessed listing endpoints.
- Implemented secure password recovery using cryptographically generated, SHA-3-hashed OTPs with Redis expiration, email delivery, and **scoped rate limiting** to mitigate brute-force attempts.

Invyta Event Management | [GitHub](#) - [API Docs](#)

FEB 2025

- Engineered a modular Flask REST backend for an event management platform with MongoDB, structured using Flask Blueprints delivering **20+** API endpoints.
- Implemented 2-factor authentication flow using JWT, bcrypt password hashing, and email OTP verification (pyotp + Flask-Mail), secured with **Flask-Limiter** rate limiting (**5 req/min** per-user, 200 req/day globally) to prevent brute-force attacks.
- Built event workflows with private/public access control, invite-token + QR code entry with moderated approval, RSVP tracking, and a tag-based recommendation engine.

Technical Skills

- Programming Languages: Python, JavaScript.
- Frameworks: Django, Django REST Framework, FastAPI, Flask.
- Databases: MySQL, PostgreSQL, Redis, MongoDB.
- Tools: Git, Github, Postman, Linux.
- Cloud: Cloudinary, AWS, EC2, S3, Beanstalk, Lambda, Auto-scaling, Load balancing.

Education

- B.E. in Artificial Intelligence & Machine Learning, University of Mumbai 2026 | CGPA: 7.5/10**

Achievements

- Smart India Hackathon Finalist 2024. Recognized for innovation in game-based learning solutions.
- Secured 1st Place in Algorithm Development at TCSC Hackathon 2025.
- Ranked Top 10 in NMIMS HACKX 3.0-2025 among 200 other teams 2025.

Certifications

- SQL for Querying by Udemy 2026.
- AWS Cloud Deployment by Udemy 2026.
- Python for AIML by Edunet Foundation 2024.
- Python Bootcamp 2023.
