

Harish Nadar

AI & ML Engineer | Backend Developer

Mumbai 400-103 | 7039369562 | nadarharish03@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [Leetcode](#)

Summary

BE AI & ML Graduate with hands on experience in building and training machine learning models across computer vision and time series domains. Hands on working across the full model development lifecycle from data preprocessing and model design to evaluation and deployment. Capable of integrating ML models into production ready REST APIs, bridging the gap between research and real-world application.

Projects

PREDICTIVE MAINTENANCE | [GITHUB](#)

MAR 2026

- Designed a **CNN-LSTM** architecture for Remaining Useful Life (RUL) prediction on multi-sensor time-series data, achieving MAE of **4.16** minutes.
- Built an ensemble fault classification model across 12 machinery fault classes with **95.18%** accuracy.
- Modeled stage bearing degradation lifecycle using interpolation across fault severity levels to simulate realistic run to failure progression.

RAIL SAHAYATI | [GITHUB](#)

JAN 2025

- Developed and integrated a **MobileNetV2** based image classification model to automatically categorize grievance images and assign complaints to the relevant department, eliminating manual verification resulting in reduced resolution time by **minutes**.
- Built a **Django** and MongoDB backend to support the AI pipeline handling complaint storage, role-based workflows, routing logic, and REST APIs.

LOCALSEVA BACKEND | [LIVE DEMO](#) - [API ENDPOINT](#) - [GITHUB](#)

JAN 2026

- Developed a Django REST Framework backend for a unified platform connecting users with local service providers, supporting bookings, reviews, reporting, and a marketplace module.
- Designed a role-based system for customers, service providers, and sellers, implementing permission-restricted endpoints, JWT-based authentication, secure PostgreSQL storage.

Technical Skills

- Data & Analysis: NumPy, Pandas, Matplotlib, seaborn
- Frameworks: Django, Django REST Framework, FastAPI, Flask
- ML/DL: Scikit-learn
- Programming Languages: Python, JavaScript
- Databases: MongoDB, SQL, Redis
- Tools: Git, Postman

Education

- B.E in AI & ML**, Mumbai University 2026 (7.5 CGPA).

Achievements

- Smart India Hackathon Finalist 2024 Recognized for innovation in game-based learning solutions.
- Secured 1st Place in Algorithm Development at TCSC Hackathon 2025.
- Ranked Top 10 in NMIMS HACKX 3.0-2025 among 200 other teams 2025.

Certifications

- Python for AIML by SAP Edunet Foundation 2024.
- Data Science and Machine Learning Using Python by Udemy 2026.
- FireBird V Robotics Course 2025 UCOE E-YANTRA.

Activities

- Jt. Technical head at Student's council 2025.
